

# SRS for Mini Project

Project Title: Quality Education for School Age students (STEM) through interactive software

## 1. Introduction

1.1 Purpose: The goal of this software is to provide an engaging, interactive and educational software.

1.2 Scope: The system will serve as an interactive learning platform for students in grades 4-12.

2. General Description: The software is a standalone product that can be accessed via ~~any~~ web browser or mobile.

3. Overview: This document extensively covers the working and functionalities of the interactive software.

## 4. Requirements

4.1 Functional Requirements. The software must be ~~interactive~~ <sup>interactive</sup> and provide a challenge.

#### 4.2 Interface Requirements:

- Admin Panel: Dashboard w/ filters.
- Mobile View: Fully responsive
- Challenging: Should be tricky.

4.3 Performance Requirements: The puzzle and interaction should be as responsive as possible.

~~5.4~~ Design Constraints: The primary constraints faced during the making of this software was the balance between fun and learning.

6. Non functional Attributes: This project is able to be deployed in classrooms

#### 7. Preliminary Schedule & Budget:

The primary working & basic prototype should be completed in 2 months with additional functionalities taking 1 month.

The total cost can be calculated as:

assuming cost/head/month = \$2000

Total cost =  $3 \times 3 \times \$2000$  (taking team of 3)  
= \$18000
